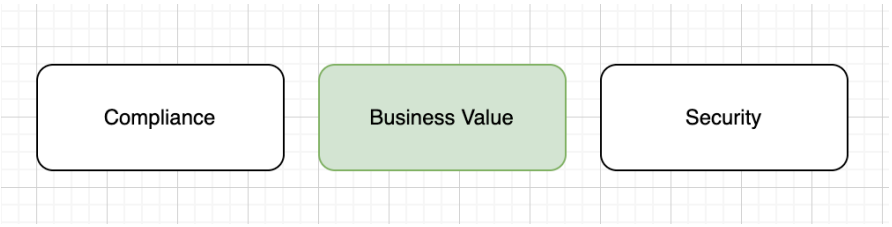
Ezra Shashirerekha Pajjuri
April 14, 2026

Dear Hiring Manager,

This executive summary outlines my risk-based QA strategy for the Ezra assignment, focusing on delivering a secure, privacy-compliant, and seamless patient experience.



Booking Flow User Journeys

- **Critical Path Coverage:** Prioritized high-risk scenarios, balancing positive and negative edge cases (e.g., payment failures, User Authentication).
- **Compliance First:** Ensured the secure handling of PHI and PII throughout the entire booking lifecycle.

Data Privacy Integration Tests

- **Access Control Validation:** Created reusable, data-driven tests to enforce strict PHI access controls.
- **Security Simulation:** Simulated unauthorized access attempts (e.g., improper member IDs) to verify HTTP 403 Forbidden responses and accurate audit logging.

API Security & Quality

- **Endpoint Defense:** Classified endpoints by data sensitivity to mandate RBAC, secure authentication, encryption, and robust input validation.
- **Continuous Security:** Proposed integrating risk-prioritized SAST, DAST, and penetration testing into the pipeline.
- **Proactive Mitigation:** Recommended proactive anomaly monitoring and cross-functional collaboration with security teams.

Test Automation Strategy

- **High-Impact Targeting:** Automated resilient, high-value test cases covering core flows and edge scenarios.
- **Scalable Architecture:** Structured the framework using the Page Object Model (POM) for long-term maintainability.
- **Efficient Execution:** Leveraged data-driven techniques to rapidly test critical parameter combinations.

As a QA Lead, I aimed to create a testing strategy that mitigates risk, ensures compliance, and promotes a culture of quality. I look forward to further discussing the technical details, tradeoffs, and future enhancements outlined in my full submission. Your feedback is highly valued.

Best regards, Shashirekha Pajjuri
